SPANNINGA STANDS OUT WITH PIMENTO

Following the introduction last year of the PIMENTO carrier rearlight, two new versions have joined the family. The PIMENTO-GUARD, which provides stylish illumination on the rear fender via a bright vertical line. Featuring COB technology, the PIMENTO series offers an amazing brightness of ca. 5 candelas (17 lumens) in a streamlined design. Available for pedelecs and dynamo-operated bikes, PIMENTO lights also have a safe-stop function and are visible up to 400m. The second version is the PIMENTO-BRAKE which features a brake-light function giving a stronger signal (up to 40 candelas) to other road users when brakes are activated. Like the PIMENTO-CARRIER, it is available

for mounting on carriers with 50mm bolt distance and its brake-light function offers visibility up to 1000m.
